

What does a line in Atlas mean?

Atlas makes a documented relationship visible. Its value comes from the type of relationship and the source that supports it.

01 Choose a concept

Start with the subject you want to understand.

02 Examine the relationship

Read its type: mechanism, dependency, tension or another documented relation.

03 Open the source

Return to the publication or research record behind the connection.

04 Check the limits

Distinguish what the source establishes from an interpretation or hypothesis.

Two concepts appearing together is insufficient. A displayed link does not by itself establish a causal relationship.
